AI-Based Cybersecurity for Microsoft 365

Microsoft 365 is the biggest corporate target for cyberattacks. Protect your business and your users with a robust cybersecurity solution for Microsoft 365 that catches 10x more advanced threats than Microsoft.

Why businesses choose Vade

After Migrating to Microsoft 365, KVC Health Systems experienced an abundance of targeted phishing and spear phishing attacks. KVC chose Vade for M365 for its improved catch rate, ease of deployment, low-touch maintenance, and API integration with Microsoft 365. In a three-month period, Vade caught 5,600 threats that Microsoft missed. "The catch rate of Vade for M365 is a 15%, if not higher, improvement from any filter I've seen. Vade catches what Microsoft misses." - **Eric Nyberg, Vice President, IT, KVC Health Systems.**

Phishing is the #1 infection vector for ransomware & supply chain attacks.	Microsoft is the most impersonated corporate brand in phishing attacks.	Vade for M365 catches 10x more advanced threats than Microsoft.	Vade for M365 is recognized in the 2021 Gartner Market Guide for Email Security.

A third-party email security solution for Microsoft 365 provides an additional layer of protection to Microsoft 365. Vade for M365 is integrated with Microsoft 365 via API, eliminating the need for MX changes and making the solution invisible to cybercriminals. And unlike ATP and EOP, it is low maintenance and easy to use, freeing up critical IT sources so they can focus more on strategic initiatives and less on administration.
